# Final Project Description v01

Summer 2016

For my final project I would like to build some kind of chord generator/creator - a tool to help musicians and non-musicians explore and understand the structure and relationship of different chords. The main element of the tool will be an interactive staff. Users can choose to generate a pre-existing/popular chord or build their own. Building/generating would be mutually exclusive in order to keep the page simple and the content above the fold.

I would like to incorporate clean and elegant design as well as some interactivity with scrolling and chord generation. My goal in the coming weeks is to further simplify and specify this design with the hopes that it will be a genuinely useful and beautiful tool.
